

Enabling the Always-On Enterprise Financial Services Industry

The world of finance is being redefined as regulations increase and as consumers and businesses adopt new technologies and expect 24.7.365, one-click access to their most sensitive data, regardless of the device. In the unfortunate circumstance of lost or compromised data, the consequences can be devastating for the business, its investors and consumers.

Today, more than 255,000 businesses across all industries have ditched their legacy backup solutions and switched to Veeam® so they can better meet the Availability needs of their modern data center. These customers embrace virtualization and cloud technologies for today's Always-On Enterprise™.

Veeam enables:

- **Data Availability through a transparent infrastructure with complete visibility.** Aggressive retention standards, growing customer demands and increasing IT-infrastructure complexity all make it challenging for financial institutions to adequately safeguard the growing amount of sensitive data they're required to store and protect. Veeam resource optimization and configuration tracking helps you evaluate the performance of your infrastructure and ensures existing configurations meet all known best practices, while also enabling 24x7, real-time monitoring and alerting.
- **Simplified, automated and built-in disaster recovery to save time and money.** Data-protection-compliance standards for financial institutions are highly regulated. Government audits now follow some of the most demanding standards in the industry. One of the most challenging requirements is consistently executing annual disaster recovery (DR) testing, which is both expensive and labor-intensive. Veeam simplifies this procedure with built-in DR testing through SureBackup® and SureReplica technologies. Veeam guarantees low recovery time and recovery point objectives (RTPO™) of <15 minutes for ALL applications and data, as well as simplifying proof-of-compliance with automated reporting.
- **Data recovery without compromising security.** There's zero tolerance for downtime today because confidential-data exposure can result in business-crippling fines. Despite this, third-party encryption services dramatically complicate data security. Veeam secures backup data with end-to-end AES 256-bit encryption without any negative impact on built-in compression.
- **Single pane-of-glass management.** ROBO centralization consumes significant bandwidth and resources for every organization. Veeam Enterprise Manager centralizes server management from multiple locations into a single view and empowers individual IT admin to manage assigned VMs, without allowing multi-tenant reporting to compromise the remainder of the data. Veeam's advanced ROBO features also help growing financial organizations improve backup and recovery times in remote environments while reducing WAN bandwidth consumption, by locating backup and restore activities at each satellite location.

Availability for the Always-On Enterprise

Meet SLAs with RTPO of < 15 minutes for ALL applications and data

HIGH-SPEED
RECOVERY

DATA LOSS
AVOIDANCE

VERIFIED
RECOVERABILITY

LEVERAGED
DATA

COMPLETE
VISIBILITY

High-speed recovery:

Rapid recovery of what you want, the way you want it

Veeam Availability Suite™ helps you quickly recover entire VMs in less than two minutes, as well as individual files and apps, enabling RTOs of < 15 minutes with tools like, Instant VM Recovery®, Direct restore to Microsoft Azure, Veeam Explorers™ for Microsoft Exchange, Active Directory, SharePoint and SQL Server, Veeam Explorer for Oracle – and more!

Data loss avoidance:

Low RPOs and streamlined DR

With features such as 2-in-1: backup and replication, built-in WAN acceleration, Advanced ReFS Integration, Backup from Storage Snapshots for Hewlett Packard Enterprise (HPE), NetApp, Dell EMC and Nimble Storage, Veeam Cloud Connect, Scale-out Backup Repository™, Dell EMC Data Domain Boost and HPE Store Once Catalyst integration and native tape support, you can avoid data loss and achieve RPOs of < 15 minutes.

Verified Recoverability:

Guaranteed recovery of every file, application or virtual server, every time

With SureBackup® and SureReplica, you can be certain that your files, applications and virtual servers can be reliably restored when needed, and ensure business resiliency through automated backup and DR testing.

Leveraged Data:

Using backup data and storage snapshots to create an exact copy of your production environment

Enjoy low-risk deployment with Virtual Lab, a virtual space which allows you to test changes in a production-like environment before actually deploying them.

Complete visibility:

Proactive monitoring and alerting of issues before operational impact

Veeam Availability Suite provides monitoring and alerting tools so you can discover and be alerted of issues in your IT environment before they have a significant operational impact. It gives you complete visibility of your Veeam backup and your VMware vSphere and Microsoft Hyper-V infrastructures.

"As one of the region's largest private banks, we use technology to maintain our leadership position. We continuously evaluate and upgrade our IT infrastructure and we've made a substantial investment in virtualization. We were looking for the right tools to manage and protect the new environment. With Veeam, we made the right choice."

Ikay Aygun,
Senior Systems Support Specialist,
Garanti Bank

Pricewaterhouse Coopers

"But with Veeam, the workload can be moved around for optimization. I can replicate on a physical machine so nothing affects the ESX server or I can run the process on the ESX server itself. Veeam gives me flexibility and that's really important. Veeam Backup & Replication gets the job done. Set it and forget it."

Carleton Ellsworth,
IT Project Manager,
Gray & Company, Inc.
